INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, 6525 Belcrest Road, Hyattsville, Maryland 20782. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety based on the definition in Section 41 (a) of the Act and decision is made to increase the seed.
- 13a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 13b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 13c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 13d Provide complete data indicative of novelty. Seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty may be submitted. Seeds submitted may be sterile.
- 13e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

EXHIBIT A

Origin and Breeding History of the Variety.

S-400 was developed from the multiple cross F8 [(N-6 x Gila) x Gila) x 414) x 414) x Frio) x Frio) x Frio] and then selfed 8 generations.

76 F8 progeny selections were bulked for the original seed increase. The selections were based on uniformity in height, maturity, oil percentage, fusarium resistance, and yellow flower color. This bulk was increased in isolation in 1973. A portion of this increase was again increased in bulk in 1974 and has since been maintained as breeders' seed stock. No significant variation has been observed in subsequent increases made from this seed stock.

7700027

EXHIBIT B

S-400 is pure yellow flower color whose florets also dry down to a yellow color. The type of oil it produces is predominately linoleic. Seedlings have very broad leaves and have very good seedling vigor. Heads are medium to large in size. Seed of S-400 usually has 3-5% hullless (blue color) seed. The leaf bracts around the head are not quite as long or as lanceolate as S-317.

'S-400'

PV# 7700027

'S-400' most closely resembles 'Frio' and 'S-296.' 'S-400' and 'S-296' are resistant to Fusarium root rot while 'Frio' is not. 'S-400' has a 3-4% higher seed oil content than 'Frio' and 1.5 to 2.0% higher than 'S-296.' 'S-400' has yellow flowers; whereas, 'Frio' and 'S-296' have yellow and orange flowers.
